Project Name	StudyAI – Smart AI educate Companion & Quiz Generator
Maximum Marks	1 Mark

Scalability & Future Plan

Scalability

Aspect	Details
Current Architecture	StudyAI follows a modular web architecture using React (Frontend), Supabase (Database & Authentication), and AI APIs (Gemini/Groq) for content generation. The application is designed with separate modules for authentication, document upload, summaries, quizzes, flashcards, and analytics.
Scalability Approach	The system uses a cloud-based database and modular components that can be scaled independently. Additional servers, caching mechanisms, and load balancing can be added to support more users and larger datasets.
Expected Growth / Load	The system is expected to support 500+ active users initially and can be expanded to support thousands of users and study materials with cloud infrastructure upgrades and database optimization.

Future Plan

S.No	Planned Feature / Enhancement	Target Timeline	Priority
1	AI Voice Assistant for interactive learning and doubt clarification		High
2	Mobile Application (Android & iOS)		High
3	Real-time Collaborative Study Groups and Discussion Forums		Medium
4	Multi-language Support and Advanced Analytics Dashboard		Medium
