

Project Initialization and Planning Phase

Date	15 July 2026
Team ID	*****
Project Title	StudyAI – Smart AI educate Companion & Quiz Generator
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to transform loan approval using machine learning, boosting efficiency and accuracy. It tackles system inefficiencies, promising better operations, reduced risks, and happier customers. Key features include a machine learning-based credit model and real-time decision-making.

Project Overview	
Objective	The primary objective of this project is to provide an AI-powered learning platform that helps students transform study materials into summaries, quizzes, flashcards, and personalized study plans, enabling efficient and effective learning.
Scope	The project focuses on improving students' learning experiences by using Artificial Intelligence to automate content generation, provide personalized study recommendations, and track learning progress through analytics.
Problem Statement	
Description	Students often struggle with lengthy study materials, inefficient revision methods, lack of personalized guidance, and difficulty identifying weak areas, which negatively affects learning efficiency and academic performance.
Impact	Solving these issues will improve learning efficiency, reduce study time, enhance exam preparation, and increase student engagement and academic performance.
Proposed Solution	
Approach	Develop an AI-powered web application that allows users to upload study materials and automatically generate summaries, flashcards, quizzes, personalized study schedules, and learning analytics.
Key Features	☐ AI-generated summaries from uploaded documents. ☐ Automatic quiz and flashcard generation. ☐ Personalized study schedule recommendations. ☐ Analytics dashboard for tracking progress and weak topics.

	☐ Secure document upload and storage. ☐ Interactive and user-friendly interface.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU for development and testing	Intel i5/i7 Processor
Memory	RAM specifications	8 GB RAM
Storage	Disk space for data, models, and logs	256 GB SSD or above
Software		
Frameworks	Frontend and Backend frameworks	React.js, Flask
Libraries	Additional libraries	Tailwind CSS, Supabase, PDF.js, Mammoth, Framer Motion
Development Environment	IDE	Visual Studio Code
Data		
Data	User-uploaded study materials (PDF, DOCX, Text files)	Dynamic dataset generated by users
